TECHNICAL SKILLS

- Languages: C++, Python, JavaScript, HTML/CSS, C, Go
- Tools & Technologies: Git, MySQL, AWS, REST, NodeJS, ReactJS, ExpressJS, TensorFlow, PyTorch

RELEVANT EXPERIENCE

Hackathon | HackDavis - UC Davis

Participant May 2024

- Collaborated with a team of four to develop a web app during a hackathon, matching volunteers with local nonprofit organizations using an innovative swipe left/right system.
- Designed and implemented a Tinder-like interface, enhancing user engagement and appeal to a younger audience, resulting in a 70% increase in user interaction during the demo.
- Integrated a backend with Flask, enabling real-time matching and efficient data handling, leading to a functional and responsive volunteer matching platform.

Project | EcoSphere - Microblog

Project HTML & CSS | JavaScript | NodeJS

- Developed "EcoSphere," a blogging platform using Node.js, Express.js, and Handlebars.js, enabling user registration via Google OAuth, post creation, and dynamic avatar generation.
- Integrated an SQL database for storing user and post data, with support for sorting posts by likes or recency and fetching/displaying emojis.
- Implemented key features such as session management, post liking, and deletion, with future enhancements planned for profile editing, notifications, security, admin panel, and commenting system.

Project | Personal Portfolio Website

Project HTML & CSS | JavaScript

- Designed and developed a professional portfolio website using HTML, CSS, and JavaScript.
- Curated content showcasing projects and skills, resulting in a 20% increase in professional network connections.
- Implemented responsive design principles and optimized website performance for a seamless user experience.

Project | AI Real Estate Estimate

Project TensorFlow | Python

- Collaboratively developed AI Real Estate Estimate project with a team of six, leveraging machine learning to achieve an 80% accuracy rate in property valuation by comparing multiple models, including Linear Regression, Decision Trees, and Random Forests.
- Implemented supervised learning algorithms, utilizing Python, Pandas, Scikit-Learn, and Optuna, resulting in a 50% reduction in prediction error and improved model transparency.
- Focused on data preprocessing and ethical AI, ensuring 100% data integrity and transparency, which led to a 30% increase in model reliability and user trust.

EDUCATION

University of California, Santa Cruz - GPA 3.91, Dean's Honors List	2021-2023
University of California, Davis - Bachelors of Science, Computer Science GPA 3.91 Dean's Honors Regents	2023-2025

NOTABLE COURSES

Data Structures & Algorithms, Software Engineer, Web Programming, Artificial Intelligence, Computer Networks
