

BRIAN HUANG

San Francisco, CA 94122 | (415) 298 - 1343 | brian.yao.huang@gmail.com
[linkedin.com/in/bryhuang9/](https://www.linkedin.com/in/bryhuang9/) | github.com/bryhuang9 | brianhuang.dev

EDUCATION

University of California, Davis

Davis, CA

Bachelors of Science, Computer Science

September 2021 - June 2025

TECHNICAL SKILLS

Languages: JavaScript/TypeScript, Python, C++, HTML/CSS, SQL, C, Go
Technologies: React, Redux, Next.js, Node.js, Express, Flask, PostgreSQL, Redis, Prisma, AWS, Docker, Kubernetes, CI/CD
Practices: REST API, Microservices, JWT, OWASP, Unit Testing, TDD, Agile, Scrum, SDLC, MVC, Event-driven Architecture

RELEVANT EXPERIENCE & PROJECTS

CivicConnect – Smart City Infrastructure Platform

Project

React | Next.js | Node.js | Kafka | PostgreSQL | Redis | Kubernetes | AWS

- Architected and deployed scalable microservices platform using event-driven architecture to process 1M+ daily IoT events, improving system reliability by 40% and reducing incident response time by 60% through real-time Kafka streaming and automated monitoring.
- Deployed containerized services on AWS EKS with CI/CD pipeline, optimizing database performance and API response times by 70% through Redis caching and load balancing.

Banking Dashboard - Full Stack Application

Project

TypeScript | React | Node.js | Express | PostgreSQL | Prisma | Redux

- Developed production-ready full-stack application with JWT authentication, RBAC, and atomic transactions via Prisma, ensuring 100% data integrity across financial operations including deposits, withdrawals, and transfers with comprehensive security (OWASP, input validation, rate limiting).
- Designed RESTful API with 15+ endpoints using MVC architecture, accelerating development by 40% through AI-assisted workflows while maintaining code quality through unit testing, debugging, and performance optimization.

AI Real Estate Valuation Platform

Project

TensorFlow | Python | Scikit-Learn | Optuna | Pandas

- Engineered end-to-end ML pipeline for predictive analytics, implementing automated data preprocessing, feature engineering, and model training with 100% data validation, improving model accuracy by 50%.
- Developed anomaly detection algorithms and quality checks to identify outliers, applying systematic performance tuning and hyperparameter optimization for clean data inputs.
- Implemented model interpretability frameworks (SHAP/LIME) and automated CI/CD pipeline for deployment, version control, and continuous monitoring in production.

HackDavis 2024 - Volunteer Matcher (Hackathon)

Participant

Davis, CA

React | Flask | REST API | SQL

- Collaborated in agile team to rapidly develop full-stack matching platform within 24-hour timeframe, implementing secure REST API with authentication middleware and comprehensive logging.
- Built responsive React frontend with component-based architecture and state management, applying backend security best practices and SQL database optimization.
